

Environmental policy

Think Green
KLAUS Multiparking is not only committed to safety and reliability but also to environmental responsibility. Our products play an important role in reducing cost, waste, and greenhouse gas emissions.

Green Products
All the parts and materials used in KLAUS parking systems are chosen to meet the most stringent environmental protection principles. All systems are built with longevity in mind, and use modern, high quality, environmentally friendly corrosion protection coatings.

Green Operation
KLAUS parking systems consume very little energy to operate, and considering the vehicle path reduction realized by using our systems, the net power consumption is potentially less than zero.

Green Construction
KLAUS parking systems create higher space efficiency which means less excavation, less concrete, less waste, less CO2 emissions and therefore in total a smaller environmental impact.

Premium Parking Systems

Developed in Germany, Implemented in the USA
by American professionals.

PARK & SMILE

Park and Smile

Among the nicest things you can experience as a car driver is being able to park your vehicle without stress at any time of the day. With no tiresome search for a parking space and no worries when leaving the car. Park and Smile. This is what all our parking systems guarantee – from our simple stack parker to our semi-automatic parker and fully automatic parking systems.

Premium parking systems with numerous strengths

Our parking systems offer valuable advantages over traditional parking solutions:

- **Flexibility and efficient use of space** – the maximum number of parking spaces within the smallest possible area
- **Economy and sustainability** – high quality for safe, economical operation
- **Easy servicing and ease of use** – equals more free time and a higher quality of life for everyone

Constant development to ensure our customers' mobility

During over 50 years of developing parking systems and with several hundred thousand parking spaces already in operation, we have learned a lot about how to improve our systems. That's why we've always brought revolutionary innovations to the market – such as the iParker with a sensor-based electro-hydraulic synchronizer and a smartphone app for operation of selected parking systems.

Economy parking systems – new from KLAUS Multiparking

Sometimes it's not about comfort, the latest technology or elegant design, and instead it all comes down to the price. We now offer an economy stack parker solution in the form of our SpaceVario systems.

All our premium parking systems at a glance:

Parkers – for independent and dependent parking

- Use small spaces efficiently
- Numerous model variants for every requirement, both indoor and outdoor
- For all standard vehicle heights

multivario
singlevario
multibase
singleup

Semi-automatic parking systems – for maximum flexibility

- Optimum use of space guaranteed
- Numerous model variants, wide range of accessories
- For all standard vehicle heights

trendvario

Fully automatic parking systems – 100% customized to your requirements

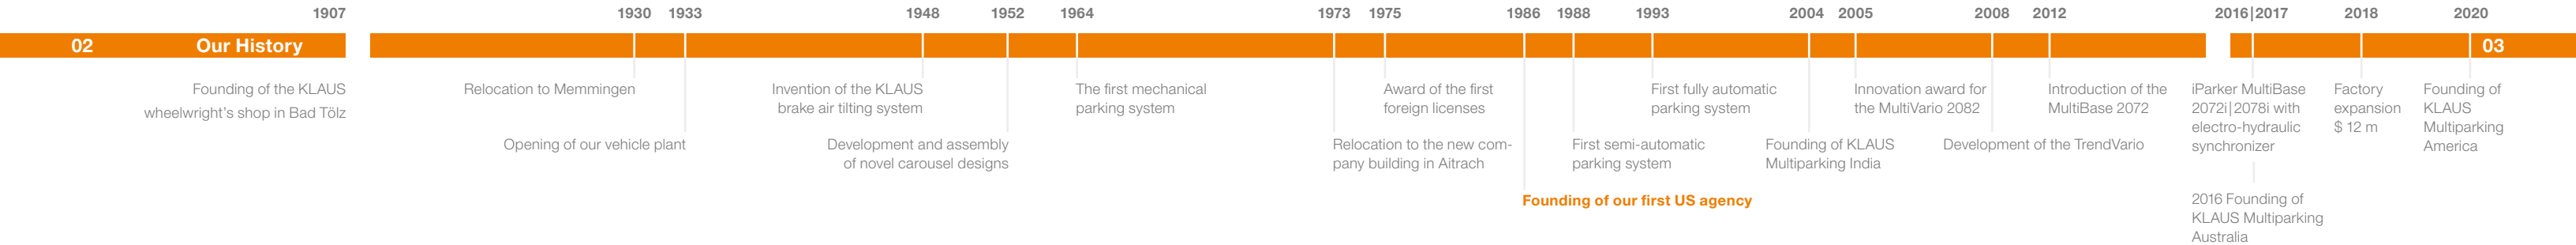

- Accommodate as many cars as possible in the smallest space with maximum efficiency
- Tower, shuttle, shelf systems and more
- Premium technology right up to the access cabin
- These systems can be adapted to specific vehicle heights and weights

Full support 24/7

Not only do we keep thinking ahead, we also care about our customers. This translates into a professional, reliable service that is an integral part of each of our parking systems. If a malfunction occurs in your system, we promise that help is always on hand – our service team can be reached 24 hours a day, 365 days a year.

Our North American partners are pleased to offer you maintenance contracts based on the example of the German “Plus” system service maintenance contract from KLAUS Multiparking.

- Inspection and Cleaning
- Preventive Maintenance
- Extension of Warranty

When it comes to preserving your system's value, we are at your disposal with a professional cleaning service or surface treatment for your system. And should you decide on a comprehensive refurbishment of your parking spaces, we are the perfect choice.

Design service

We make sure you can concentrate fully on your construction project – our experienced team of experts is at your side when planning the optimal system from KLAUS Multiparking. Or plan your Multiparker by yourself – using the ProDesigner planning software from KLAUS Multiparking. We are sure to find the perfect parking solution for your construction project!

Maintenance service

Ensuring you can enjoy your parking system for a long time – our trained staff perform all maintenance work quickly, reliably and competently. Rely on us, because we know KLAUS Multiparking systems better than anybody else. Regular maintenance increases the service life of your parking system with optimal value retention.

Refurbishment service

An easy way to increase the value of your property – even after years of use, there is still no need to replace your existing parking system, because we can bring it up to date via targeted upgrades. Before refurbishing a parking system, we analyze the existing components and identify all parts that require replacement – to ensure maximum system utilization at minimal cost.
